OUR EVOLUTION

ESMIG is moving beyond smart energy measurement towards smart energy management, including monitoring and control of energy consumption and energy generation at consumer sites or aggregated level.

We are the European voice of smart energy solution providers.

Our members provide products, information technology and services for multicommodity metering, display and management of energy consumption and production at consumer premises.

WHAT DO WE DO?

ESMIG drives the timely introduction of efficient and scalable consumerfriendly products and services fundamental to the participation of end-users in the smart energy and water systems of Europe's future.

Our activities are focused around systems for smart metering, consumer energy management and safe and secure data transfer.

We work closely with EU policy makers and other EU associations to make Europe's energy and water systems cleaner, reliable, more efficient and the European consumer informed, empowered and engaged.

OUR MEMBERS

WE MAKE ENERGY SMART

HOW DO WE MAKE ENERGY SMART?

Our member companies are Europe's leaders in smart consumer energy management products and services - from Smart Metering to Demand Response and Demand Side Management.

Our members develop future-proof products and services for producers and consumers to monitor and manage energy supply and demand from a central point of view at consumer sites or at aggregated level.

These products and services enable better outage detection, customized tariffs, accurate bills, a precise overview of consumption and manageable demand - making energy cleaner, more affordable and more reliable.

Information is at the core of our innovation. Our members' products and services provide the crucial ingredients in smart consumer energy management. They accurately measure, transfer and process energy related data while ensuring this data is relevant, safe and reliable.

HOW DO WE HELP EU BECOME A LEADER IN SMART ENERGY MANAGEMENT?

Our expertise is rooted in our real, hands-on experience of how energy supply and demand works in the market place.

We advocate for a regulatory framework that accelerates the introduction of our member's innovative products and services, which are fundamental to the smart energy and water systems of Europe's future.

We actively contribute to the creation of a competitive internal energy market by development of architectures and open standards that allow efficient implementation and integration of new energy management technologies and services.
